

CULTEC STORMFILTER® T-80

Filtration Unit for Non-Traffic Applications

CULTEC StormFilter® T-80 is a cost-effective filtration unit used to remove leaves and debris from rainwater collected by catchbasins or gutters. StormFilter T-80 prevents leaves and debris from clogging outflow systems and piping. Rainwater is piped into the endwall of the StormFilter T-80 and passed thru a removable filter. Pollutants are collected within the tank and may be removed by a wet/dry vac. The filter bag may be cleaned or replaced. This compact unit is easy to install and simple for the homeowner or maintenance personnel to maintain. It is perfect for treating roof and driveway runoff for light commercial or residential applications.

*Shown with optional accessories.
Riser and pipe sold separately.*

Benefits

- Homeowner-friendly
- Simple to maintain
- Lightweight
- Prevents clogging
- Quick and easy installation
- Minimal site disturbance

riser for maintenance access
