CULTEC Update

New Stormwater Design Calculator

We are pleased to announce a revised version of the **CULTEC** Stormwater Design Calculator.

The latest version of the calculator automatically populates the stone above, below and between chambers, based on the model selected from the dropdown menu.

These values may be overridden, but will automatically update to the default values as other models are selected from the dropdown menu.

This tool is helpful as Engineers work to create their stormwater prevention plans. You can view the updated Stormwater Design Calculator by clicking here:

COVID-19 Update

We're here to help.

We are currently open for business, and running normal hours for logistics and production. Though the company is working remotely outside of those two functions, we are planning to strategically open our headquarters within the parameters of what we feel will be safe for our employees and customers. We will keep everyone informed moving forward through the reopening.

We're looking forward to continuing to serve you in the meantime, and will hopefully see everyone soon.
